

Complete Operations Guide

Dashboard setup, recruitment tickets, team-event spreadsheets, member counts, reaction roles, YouTube feeds, moderation, event helpers, logs, and troubleshooting.

Dashboard admins

Configure channels, roles, panels, feeds, teams, and server settings.

Recruitment staff

Operate tickets, tutorials, transcripts, ban lists, and invite workflows.

Spreadsheet staff

Process screenshots, correct OCR data, and generate weekly/monthly reports.

Moderators

Use warning, cleanup, role, lookup, reminder, and utility commands.

Use the linked index on the next page to jump to any section in the HTML version. The dashboard Documentation tab contains the same structure.

Linked Index

Each item below links to its section in the HTML document.

01

Start Here

Bot suite overview, access model, and mental model.

02

Dashboard Operations

Save model, sync buttons, server context, and OAuth.

03

Recruitment Tickets

Panel setup, ticket lifecycle, tutorials, transcripts, and close outcomes.

04

Team Event Spreadsheets

Screenshot sessions, OCR, outputs, corrections, and reports.

05

Member Counts

Team counts, recruitment status, aliases, sync, and role automation.

06

Reaction Roles

Community role panels, options, reactions, and sync behavior.

07

YouTube Feeds

Feed configuration, templates, and manual checks.

08

Moderation

Warnings, bans, kicks, cleanup, lookups, roles, and legacy commands.

09

Event Helpers

Top-three posts, team-event summaries, mastery assets, and reminders.

10

Troubleshooting

Logs, diagnostics, common failures, and recovery steps.

Start Here

The DCA Bot Suite has two parts: the Discord bot and the dashboard website.

Discord bot

Handles slash commands, prefix commands, recruitment threads, reaction-role sync, reminders, moderation actions, feed announcements, and spreadsheet reports.

Dashboard

Controls persistent configuration. Use it for channels, roles, panels, spreadsheets, feeds, team counts, logs, and server settings.

Data flow

Dashboard settings are saved to config, bot utilities read that config, and Discord commands or scheduled jobs execute workflows.

Dashboard access	Discord OAuth plus the configured dashboard access role.
Spreadsheet access	Administrator permission or the configured spreadsheet team access role.
Recruitment access	Recruiter and manager role settings control ticket operations.
Community vs recruitment	The dashboard distinguishes community and recruitment server channels/roles so features post to the right guild.

Dashboard Operations

Use the dashboard as the main configuration surface.

Save before relying on changes

Most edits stay local until Save is pressed. After saving, use the relevant sync button for Discord messages that need to be refreshed.

Quick actions

The Overview tab can sync the apply panel, reaction roles, and member count message without leaving the page.

Dashboard Tab	Purpose
Overview	Operational summary, quick sync actions, and recent recruitment outcomes.
Tickets	Recruitment panel, ticket settings, outcomes, tutorials, invites, and ban list channel.
Reaction Roles	Community reaction role panel configuration.
YouTube	Feed configuration and announcement template.
Spreadsheets	Gemini extraction settings and team-event channel setup.
Members	Member-count message, team list, aliases, and role automation.
Logs	Bot logs, recruitment logs, ticket records, transcripts, and applicant images.
Documentation	Native dashboard copy of this guide with section links.
Server	Guild IDs, dashboard/recruiter/manager roles, command log channel, locale, welcome, and leave messages.

/dashboard

Returns the configured dashboard URL in Discord.

Recruitment Tickets

Recruitment workflows cover panel setup, applicant threads, staff actions, tutorials, transcripts, and outcomes.

Panel

Configure panel channel, title, description, questions, private thread mode, recruiter role, and log channels.

Ticket lifecycle

Applicant opens a ticket, staff claims it, staff reviews answers/screenshots, staff closes with an outcome, and the bot archives/locks the thread.

Records

Recruitment logs, transcript previews, ticket metadata, and applicant images are visible from the Logs dashboard tab.

`/tickets setup`

Configure and post the apply panel.

`/tickets sync-panel`

Refresh the apply panel from dashboard/config settings.

`/tickets sync-banlist`

Refresh the recruitment ban list panel.

`/tickets status / logs`

Inspect ticket configuration or recent outcomes.

`/tickets claim / close`

Claim a thread or close it with an accepted/rejected/team outcome.

`/tickets add / massadd / remove / rename`

Manage thread access or naming.

`/tickets tutorial`

Send a configured tutorial video into the ticket thread.

`/tickets archive / delete`

Clean up finished ticket threads.

`/invite`

Create or send the configured destination-server invite.

Team Event Spreadsheets

Spreadsheet sessions convert HCR2 event screenshots into structured outputs and reports.

Event output

Processed events produce an XLSX workbook, an own-team spreadsheet image, and a chart image. Corrections can be applied and outputs rebuilt.

Period reports

Weekly reports focus on blue kills and KAB. Monthly reports roll up score, points, attendance, missed events, blue kills, and KAB.

Report Field	Meaning
Blues	Number of enemy players a driver ranked above.
%Kill	Total blues killed divided by total possible blues.
Total	Total blues killed in the report period.
Max	Total possible blues in the report period.
#KAB	Events where the driver ranked above every opponent.

`/spreadsheets status / sessions` Inspect setup and recent sessions.

`/spreadsheets generate
rerun_gemini:true` Process a session and optionally rerun Gemini extraction.

`/spreadsheets summary / file /
chart` Review parsed data or retrieve generated artifacts.

`/spreadsheets weekly / monthly
anchor_date:YYYY-MM-DD` Build period reports for a specific week or month.

`/spreadsheets correct-name /
correct-team / correct-placement /
correct-points / correct-event-
name` Fix OCR or classification mistakes and rebuild outputs.

`/spreadsheets rebuild /
regenerate-weekly / regenerate-
monthly` Regenerate event files or force report posting.

Best practice

Post all screenshots for one event together, from one user, in the monitored channel.
Do not mix unrelated images during the grouping window.

Member Counts and Team Roles

Member tools maintain the public team count and optional role automation.

Team records

Each team has a name, division, player count, recruitment status, aliases, and optional Discord roles.

Sync

Sync writes the configured member-count message to Discord.

Automation

Recruitment and community roles can be assigned with optional delays after accepted tickets or rules completion.

`/membercount sync`

Sync the member-count message.

`/membercount set`

Set one team's player count and optional recruitment status.

`/membercount list`

List configured teams.

`/teamcount / updatecount`

Quickly update player count or recruitment status.

Reaction Roles

Reaction role panels assign community server roles through configured emoji options.

Panel

Each panel has a name, enabled state, channel, message ID, message text, and role options.

Options

Each option maps an emoji to a role and can include a human-readable label.

Sync

After editing panels, sync reaction roles so Discord messages and reactions match the dashboard.

`/roles add`

Add a role to a user.

`/roles remove`

Remove a role from a user.

YouTube Feeds

YouTube feeds announce new uploads using configured channel IDs and an announcement template.

Default post channel	Used when a feed does not define its own post channel.
-----------------------------	--

Check interval	How frequently the feed checker polls for new uploads.
-----------------------	--

Last video ID	Stored per feed to avoid reposting the same upload.
----------------------	---

<code>/yt list</code>	List configured feeds.
-----------------------	------------------------

<code>/yt check</code>	Force a feed check.
------------------------	---------------------

<code>-yt</code>	Legacy prefix YouTube list command.
------------------	-------------------------------------

Moderation and Staff Utilities

The bot includes slash and legacy prefix moderation commands.

Slash commands

Prefer slash commands for supported moderation because options are explicit and Discord permissions are clearer.

Prefix commands

Legacy commands remain available for cleanup, kick, mass kick, timeout, unban, warnings, and utility flows.

`/warn / clearwarns`

Manage warning records.

`/ban / snap ban / snap kick`

Moderation actions with reasons.

`/whois`

Inspect account age, join age, ID, avatar, and status.

`-clean / -kick / -mkick / -mute /
-unban / -warnings`

Legacy prefix moderation commands.

Event Announcement Helpers

These commands create consistent event posts and utility reminders.

`/top3te`

Post top three team-event winners with a screenshot and ping role.

`/top3km`

Post top three KM/chest winners with chest level and screenshot.

`/teameventsummary`

Post a team-event summary with streaks, toppers, points, aura count, ping role, and screenshot.

`/garage / sportscar`

Show HCR2 mastery-related assets.

`/remindme / reminders /
cancelreminder`

Create, list, or cancel reminders.

`-announce / -temperature / -
pingmessage / -team`

Legacy utility commands.

Logs and Troubleshooting

Use dashboard logs, status commands, and diagnostic commands to recover cleanly.

Problem	Check	Fix
Dashboard login denied	OAuth setup and dashboard role	Check dashboard environment variables and role configuration.
Apply panel stale	Tickets dashboard settings	Save config, then sync the panel.
Reaction roles not updated	Panel channel/message IDs	Save config, then sync reaction roles.
Spreadsheet session missing	Monitored channel, enabled team, attachments	Use status and test-grouping, then post images in the correct channel.
Bad spreadsheet OCR	Summary preview and parsed rows	Use corrections, rebuild, or rerun Gemini.
Report did not post	Output channel and duplicate guard	Set output channel or regenerate with the correct anchor date.

<code>/help</code>	Show high-level command help.
<code>/spreadsheets test-gemini</code>	Rerun Gemini extraction for preview debugging.
<code>/spreadsheets test-grouping</code>	Inspect pending screenshot grouping state.
<code>/spreadsheets preview</code>	Preview parsed output without posting final files.

Operational rule

When correcting data, fix the event session first, rebuild the outputs, then regenerate weekly or monthly reports that depend on that event.
